Datasheet

FEATURES

- Look-ahead circuitry enhances cascaded counters
- Fully synchronous in count modes
- Parallel asynchronous load for modulo-N count lengths
- Asynchronous clear
- 0.6µm CRH CMOS process
 - Latchup immune
- High speed
- Low power consumption
- Wide power supply operating range of 3.0V to 5.5V
- Available QML Q or V processes
- 16-lead flatpack
- UT54ACS193E - SMD 5962-96566

DESCRIPTION

The UT54ACS193E is a synchronous 4-bit, reversible up-down binary counter. Synchronous operation is provided by having all flip-flops clocked simultaneously so that the outputs change coincident with each other when instructed. Synchronous operation eliminates the output counting spikes normally associated with asynchronous counters.

The outputs of the four flip-flops are triggered on a low-to-high-level transition of either count input (Up or Down). The direction of the counting is determined by which count input is pulsed while the other count input is high.

The counter is fully programmable. The outputs may be preset to either level by placing a low on the load input and entering the desired data at the data inputs. The outputs will change to agree with the data inputs independently of the count pulses. Asynchronous loading allows the counter to be used as modulo-N divider by simply modifying the count length with the preset inputs.

A clear input has been provided that forces all outputs to the low level when a high level is applied. The clear function is independent of the count and the load inputs.

The counter is designed for efficient cascading without the need for external circuitry. The borrow output (\overline{BO}) produces a low-level pulse while the count is zero and the down input is low. Similarly, the carry output (\overline{CO}) produces a low-level pulse while the count is maximum and the up input is low.

The device is characterized over full HiRel temperature range of -55°C to +125°C.

Notes:

1. Logic will not latchup during radiation exposure within the limits defined in the table.
2. Device storage elements are immune to SEU affects.

ABSOLUTE MAXIMUM RATINGS

SYMBOL	PARAMETER	LIMIT	UNITS
V _{DD}	Supply voltage	-0.3 to 6.0	V
V _{I/O}	Voltage any pin	-0.3 to V _{DD} +0.3	V
T _{STG}	Storage Temperature range	-65 to +150	°C
T _J	Maximum junction temperature	+175	°C
T _{LS}	Lead temperature (soldering 5 seconds)	+300	°C
Θ _{JC}	Thermal resistance junction to case	15	°C/W
I _I	DC input current	±10	mA
P _D ²	Maximum package power dissipation permitted @ T _c = +125°C	3.3	W

Note:

1. Stresses outside the listed absolute maximum ratings may cause permanent damage to the device. This is a stress rating only, functional operation of the device at these or any other conditions beyond limits indicated in the operational sections is not recommended. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. Per MIL-STD-883, method 1012.1, Section 3.4.1, $P_D = (T_{j(max)} - T_{c(max)}) / \Theta_{jc}$

Notes:

1. Functional tests are conducted in accordance with MIL-STD-883 with the following input test conditions: $V_{IH} = V_{IH(\text{min})} + 20\%$, $- 0\%$; $V_{IL} = V_{IL(\text{max})} + 0\%$, $- 50\%$, as specified herein, for TTL, CMOS, or Schmitt compatible inputs. Devices may be tested using any input voltage within the above specified range, but are guaranteed to $V_{IH(\text{min})}$ and $V_{IL(\text{max})}$.
2. Supplied as a design limit but not guaranteed or tested.
3. Per MIL-PRF-38535, for current density $\leq 5.0\text{E}5$ amps/cm², the maximum product of load capacitance (per output buffer) times frequency should not exceed 3,765 pF/MHz.
4. Not more than one output may be shorted at a time for maximum duration of one second.
5. Capacitance measured for initial qualification and when design changes may affect the value. Capacitance is measured between the designated terminal and V_{SS} at frequency of 1MHz and a signal amplitude of 50mV rs maximum.
6. Maximum allowable relative shift equals 50mV.
7. All specifications valid for radiation dose $\leq 1\text{E}6$ rads(Si) per MIL-STD-883 Method 1019.
8. Power dissipation specified per switching output.
9. Guaranteed by characterization, but not tested.

Ordering Information: UT54ACS193E: SMD

Notes:

1. Lead finish (A,C, or X) must be specified.
2. If an "X" is specified when ordering, part marking will match the lead finish and will be either "A" (solder) or "C" (gold).
3. Total dose radiation must be specified when ordering. QML Q and QML V not available without radiation hardening. For prototype inquiries, contact factory.
4. Device type 02 is only offered with a TID tolerance guarantee of 3E5 rads(Si) or 1E6 rads(Si) and is tested in accordance with MIL-STD-883 Test Method 1019 Condition A and section 3.11.2. Device type 03 is only offered with a TID tolerance guarantee of 1E5 rads(Si), 3E5 rads(Si), and 5E5 rads(Si), and is tested in accordance with MIL-STD-883 Test Method 1019 Condition A.
